

## PAROC Marine products

### DNV type approvals

## DNV type approvals for PAROC Marine products

---

PAROC® stands for energy-efficient and fire protective insulation products and solutions of stone wool for new and renovated buildings, HVAC, marine and offshore and other industrial applications. Behind those products there is an 80-year history of stone wool production knowhow backed with technical insulation expertise and innovation.

In our effort to streamline our certification activities, we have decided on 29 Aug 2023 to let go of our DNV type approval certificates for Marine applications. We currently hold the MED approvals for the same applications and thus do not consider a separate type approval from DNV necessary. This means that for any products manufactured after this date, the DNV type approvals are not valid and shall not be used in cases where DNV type approval is required.

Products manufactured prior to the above-mentioned date shall be valid for use according to IMO FTP Code 2010:

“5.1.5. The approval shall be valid when the product is installed on board a ship. If a product is approved when manufactured, but the approval expires before the product is installed on the ship, the product may be installed as approved material, provided that the criteria have not changed since the expiry date of the approval certificate.”

We are aware that certain Flag states do not recognize the Notified Body holding our MED type approvals and are looking towards a different solution through an IACS member in the future.
